

# STAGES OF DEVELOPMENT

STAGE	DESCRIPTION	CAPACITY OF PORT	OPERATIONAL
1	Port construction: → Jetty → Hematite storage area → Grain storage area → Ship-loading areas → Supporting infrastructure	→ 2 million tonnes hematite → 500,000 tonnes grain	Q3 2014 (dependent on development approval of stage 2 and magnetite mines proceeding)
2	→ Magnetite import from mines via slurry pipeline → Magnetite storage area → Magnetite processing plant → Desalination plant	→ 10 million tonnes iron ore → 1 million tonnes grain	?
3 & 4	→ Expansion of magnetite storage and processing → 2 extra hematite storage sheds → 2 extra grain storage sheds → Expansion of desalination plant	→ 20 million tonnes in total	?

Each new stage will be assessed as a separate development application. The phases of development can be seen in the diagram below.
